01 — ABOUT

Building the future, *one product at a time*

I've always introduced myself as an engineer and a tech enthusiast, someone who tears apart how things work and gets a kick out of putting them back together, better. Growing up, MKBHD and the smartphone revolution pulled me into tech. These days, it's the architecture behind large language models and the craft of building products that millions of people actually use.

Born and raised in Mumbai, India I'm currently living in San Francisco, trying to pursue my childhood dreams here in the Silicon Valley. You can find me frequenting the city beaches, to find answers to my questions of life and in search of a good spot to see the sunset!!!

I'm a product manager who thinks in data. I've spent years sitting at the intersection of engineering, design, and business, figuring out what to build next and why it matters. Machine learning and data science aren't just buzzwords on my resume. They're how I think about problems: find the signal, test the hypothesis, ship the thing, measure what happens. From building AI-powered acquisition tools to studying neural networks and transformer architectures on weekends, this work genuinely excites me.

I'm a product manager, a data engineer, a startup enthusiast, a videographer, a marathon runner, a proud son, a loving brother, and a lifetime student. I'm an optimist. And I'm the person who believes that consistent hardwork almost always beats smart work.

I am those things, but I'm also much more. I'm more than a limited character count and a filtered photo to be found in this empty void of social media.

And, I'm still more than these things. I'm years of varied experiences. I'm a drop in the ocean. I'm a part of the ever-changing tide. And I will be more things yet to come.
